

TEST REPORT

Reg. No : 2104144933 Reg. Date : 30-Apr-2021 00:00

Name : PARUL SHAH

Age/Sex: 31 Years / Female

Ref. No: S

Ref. By :

Location : KAIVAL PATHOLOGY LAB @ GOTA

Collected On : 30-Apr-2021 15:49

Report Date : 01-May-2021

Dispatch At :

Tele No:

DOB:

***SARS-CoV-2 (COVID-19) QUALITATIVE rRT-PCR**

Test principle : Real Time Reverse Transcription PCR (ICMR approved kit)

Test description : Gene tested "E"gene,"N"gene & "ORF1ab"gene

SARS-COV-2 RNA	POSITIVE
Confirmatory Gene CT value	18.83

ICMR Reg. No :IVSLIVSPAG

ICMR-NIOH recommended categories of Viral load based on Cycle Threshold (Ct) detected by RT-PCR.

Sr.No.	CATEGORY OF VIRAL LOAD	Ct VALUE
1	High viral load	17 to less than 24
2	Moderate viral load	24 to less than 31
3	Low viral load	31 to 38

Panel Comments:

- This molecular test uses Real Time PCR technology based on nucleic acid amplification assay for qualitative detection of RNA of Novel Corona-virus (COVID-19) from Nasopharyngeal/Oropharyngeal swabs. It is an in-vitro diagnostic test which can also detect very low levels of COVID-19 RNA in human clinical samples. The assay includes an internal control with every sample to check for PCR inhibition.
- A " Positive" result indicates presence of SARS-CoV-2 in the sample. Positive result does not rule out infection with bacterial or other viral co-infections.
- A " Negative" result indicates absence of SARS-CoV-2 infection in the given specimen with the assay used. A negative result does not exclude the possibility of COVID-19 infection as the results are dependent on many other factors.

This is an electronically authenticated report.

* Denotes Test not in NABL Scope.

Approved On : 01-May-2021 11:12

Generated On : 01-May-2021 16:48

- Note:**
- Results must be interpreted in conjunction with other clinical and/or laboratory findings.
 - Negative result does not rule out the possibility of COVID-19 infection. Presence of inhibitors in sample, mutations at primer or probe binding sites or insufficient RNA in patient sample can influence the results.

- Patient Instructions:**
- Kindly consult referring Physician/ Authorized Govt. hospital for appropriate follow up.
 - Details of all the positive patients will be communicated to Epidemiology Cell whom you are requested to support.
 - "Positive" status needs to be notified to the appropriate authorities as per the existing rules/regulations.

- Clinical Background:**
- COVID-19 is a new disease, caused by a novel corona virus SARS-CoV-2. Reported illnesses have ranged from mild symptoms to severe illness. Symptoms like Fever, Cough, and Shortness of breath may appear 2-14 days after exposure. The virus is thought to spread mainly from person-to-person, between people who are in close contact and through respiratory droplets. It can also spread from contact with infected surfaces or objects.
- Disclaimer:
- The above result relate only to the specimens received and tested in laboratory and should be always correlate with clinical findings and other laboratory markers.
 - Improper specimen collection, handling, storage and transportation may result in false negative results.

- Abbreviations :**

HRCT (96 Slice) SCAN OF THORAX:

HRCT imaging was performed using sub-millimetre thin plain axial scan of thorax from thoracic inlet to diaphragm.

FINDINGS:

Evidence of few focal patchy areas of ground glass air space opacities (predominantly of peripheral distribution) are seen involving right lower lung and left lung lobes.

Lobar involvement is as described below

Right lower lobe: <5%

Left upper lobe: <5%

Left lower lobe: <5%

No evidence of any other interstitial abnormality is seen.

Few enlarged mediastinal lymph nodes are seen. No significant necrotic mediastinal lymphadenopathy is seen on un-enhanced mediastinal window settings.

No pleural or pericardial effusion is seen.

Trachea & main bronchi appear normal.

Visualised portion of oesophagus, thoracic cage and soft tissue appear normal.

CONCLUSION:-

HRCT findings of few focal patchy areas of ground glass opacities (predominantly of peripheral distribution) are seen involving right lower lung and left lung lobes.

CORADS-VI (RT PCR positive for COVID 19) with possible CT severity score of 03/25. (Mild pulmonary involvement).

Clinico-pathological correlation suggested.
